

"RECOGNITION IN THE
BLINK OF AN EYE"

THE LEADER IN IRIS BIOMETRIC TECHNOLOGY

BI² Technologies is a national leader in providing biometric technology, giving sheriffs the tools they need to keep their communities safe. Our biometric solutions, combined with the only national, web-based iris biometric network & database, help improve public safety in law enforcement agencies across the country.

ID FROM ANYWHERE

When apprehending a suspect, knowing the identity and criminal history of the individual is critically important.

The Mobile Offender Recognition & Identification System (MORIS™) is a mobile, wireless and handheld offender recognition and information system, compatible with Apple, Android and Windows that gives law enforcement agencies across the country the wireless ability to positively identify offenders from any location where there is cell service supporting Internet connectivity.

This one-of-a-kind system allows sheriffs and other law enforcement agencies to quickly authenticate the identity of the person in their custody and provides record information from other jurisdictions across the country once the offender is registered in the system.

CUTTING EDGE TECHNOLOGY

IRIS TECHNOLOGY

MORIS™ works in conjunction with BI2's Inmate Recognition and Identification System (I.R.I.S.™), the nation's only secure, encrypted, real-time national criminal justice data sharing network, based on Iris Biometric technology.

SPEED

Any offender enrolled in the national database can be positively identified in seconds from virtually anywhere.

KEEPING COMMUNITIES SAFE

Developed in collaboration with the National Sheriff's Association to keep communities and staff safe.
